Triangulation

P3PC202

Part Number

- 2 mutually independent switching outputs
- Integrated jump detection
- Intuitive operating concept
- Rugged aluminium housing
- Switching point independent of material, color and brightness

These laser distance sensors work with a fine red light beam and a high-resolution CMOS line. They determine the distance between the sensor and the object by means of the triangulation principle. Thanks to the integrated TripleA technology, the sensors offer high precision, temperature stability and material independence. This means they deliver accurate results even with objects of different materials, colors and shapes, as well as in fluctuating light and temperature conditions. The intuitive operating concept simplifies initial start-up and makes the sensors versatile all-rounders.
